4. FIRST AID MEASURES

Description of First Aid Measures

Eye Contact: Immediately flush eyes with water for at least 15 minutes, If irritation or symptoms occur or persist, consult a physician

Skin Contact: Remove contaminated clothing. Flush area with large amounts of water. Use soap. If irritation or symptoms occur or persist, consult a physician.

Ingestion: Never give anything by mouth to an unconscious person. Wash out mouth with water. Do not induce vomiting unless directed by medical personnel. Seek medical attention immediately.

Inhalation: Remove to fresh air and keep patient at rest. If irritation or symptoms occur or persist, consult a physician.

Injection: Seek medical attention immediately! Immediately apply ice to the area of injection to help reduce potential swelling. The affected area should be cleaned as soon as possible. The antigen portion of the vaccine is of little risk to the victim and cannot be transmitted to people as it is merely a protein, not live bacteria. However, there is a risk of bacterial infection since the injection site was not sterile. For this reason, antibiotics and a tetanus shot may be prudent. Because the vaccine may be an emulsion of mineral oil with surfactants, the fluid must be removed. Medical personnel should lance, locally debride and remove the emulsion before tissue reaction begins and causes inflammation.

5. FIRE-FIGHTING MEASURES

Special Hazards Arising from the Substance or Mixture

Fire/Explosion Hazards: Not flammable.

Advice for Fire-Fighters: During all firefighting activities, wear appropriate protective equipment, including self-contained breathing apparatus.
